SECTION 5

FIRE FIGHTING MEASURES

General Hazard: Toxic fumes may be emitted in a fire situation.

Extinguishing Media: Foam, dry chemical, carbon dioxide, water spray or fog.

Hazardous Combustion Products: Normal combustion forms carbon dioxide, water vapor and may produce oxides of carbon, nitrogen and phosphorous.

Explosion Hazards: Dust suspended in air may create a potentially explosive environment.

Firefighting Procedures: Evacuate area and fight fire upwind a safe distance to avoid hazardous vapors and decomposition products. Fire exposed containers can build up pressure and should be kept cool with water spray if possible. Explosive vapor could form from ruptured containers. Dike and collect water used to fight fire to prevent environmental damage due to run-off. Foam or dry chemical fire extinguishing systems are preferred to prevent environmental damage from excessive water run-off.

Firefighting Equipment: As in any fire, wear self-contained breathing apparatus pressure-demand (MSHA/NIOSH approved or equivalent) and full protective gear.

SECTION 6

ACCIDENTAL RELEASE MEASURES

Small Spill: Contain material. Sweep up spilled material which is contaminated and place it and damaged unusable containers in a container appropriate for non-hazardous chemical waste. Check local, state, and federal regulations for proper disposal.

Large Spill: Contain material. If material is not contaminated with other materials the product may still be viable for use. Sweep up spilled material which is contaminated and place it and damaged unusable containers in a container appropriate for non-hazardous chemical waste. Check local, state, and federal regulations for proper disposal.
