

StrikeLock™

DEPOSITION AID, CANOPY PENETRANT, DRIFT CONTROL AGENT AND HIGH SURFACTANT OIL CONCENTRATE

PATENT PENDING

PRINCIPAL FUNCTIONING AGENTS:

Polyglyceryl phthalate ester of coconut oil fatty acids and methylated soybean oil.....	100.0%
CONSTITUENTS INEFFECTIVE AS SPRAY ADJUVANTS	0.0%
TOTAL.....	100.0%

Surfactant content 25%

All ingredients are exempt from the requirements of a tolerance in 40 CFR 180.

SHAKE WELL BEFORE USING

KEEP OUT OF REACH OF CHILDREN

CAUTION

PRECAUTIONARY STATEMENTS

Based on currently available data, this product does not meet the regulatory definition of a hazardous substance. However, good industrial hygiene practices should be used in handling the product. Wash hands thoroughly after handling.

FIRST AID

IF IN EYES: Rinse cautiously with water for 15 minutes. Remove contact lenses, if present, and easy to do so. Continue rinsing. If eye irritation persists get medical attention.

For Emergency, Spill, Leak, Fire Exposure or Accident, Call: CHEMTREC 1-800-424-9300

STORAGE AND DISPOSAL

STORAGE: STRIKELOCK should be stored above freezing. If product freezes, warm and agitate (recirculate) prior to using. Store in original container only and keep sealed. Store in closed storage areas.

ADJUVANT DISPOSAL: Wastes resulting from the use of this product may be disposed of through on-site spray application or at an approved waste disposal facility.

CONTAINER DISPOSAL: Do not reuse empty container. Triple rinse (or equivalent) during mixing and loading. Recycling decontaminated containers is the best option of container disposal. The Agricultural Container Recycling Council (ACRC) operates the national recycling program. Contact your state and local ACRC recycler or visit the ACRC web page at www.acrecycle.org. Decontaminated containers may also be disposed of in a sanitary landfill.

GENERAL INFORMATION

STRIKELOCK is designed to maximize pesticide performance by improving deposition of the spray application onto the intended target. STRIKELOCK improves coverage and reduces drift and evaporation of pesticides being applied by ground or air. STRIKELOCK does not negatively affect spray pattern like other drift control adjuvants even when using air assisted type nozzles. STRIKELOCK should be used in conjunction with proper spray equipment selection set-up and use including boom height, nozzle type,

size and pressure. Along with good judgment and the proper selection and use of spray equipment, STRIKELOCK can help professional applicators ensure the maximum performance of pesticides.

STRIKELOCK is also a unique highly concentrated methylated soy oil and surfactant based spray adjuvant. STRIKELOCK maximizes the effectiveness of postemergence or foliar active herbicides, with reduced rates compared to other methylated seed oils. The improved performance and reduced use rates of STRIKELOCK comes from a patented proprietary formulation. This technology allows for quicker and more complete uptake and absorption of herbicides, insecticides and fungicides compared to traditional oil concentrates or nonionic surfactants, especially on oversized and stressed weeds.

DIRECTIONS FOR USE

STRIKELOCK may be used whenever the pesticide label calls for a methylated seed oil (MSO), crop oil concentrate (COC), or high surfactant oil concentrate (HSOC). Check the pesticide label for specific crop use, timing and adjuvant rate required for that pesticide.

RATES OF APPLICATION

STRIKELOCK may be used at rates that are less than or equal to the MSO or COC rates, and similar to HSOC rates, recommended on the pesticide label. The suggested use rate for STRIKELOCK is 0.5% v/v or 8 ounces per acre. Do not use less than 6.4 ounces per acre.

MIXING INSTRUCTIONS

Always add STRIKELOCK adjuvant to the spray mix last and continue agitation or follow specific tank filling and mixing information provided on the herbicide label. Refer to herbicide labels for additional recommendations or precautions.

MAINTAIN AGITATION AT ALL TIMES UNTIL THE CONTENTS OF THE TANK ARE SPRAYED OUT.

Mixing: Before mixing pesticides with STRIKELOCK, conduct a jar test to determine compatibility. Add STRIKELOCK after pesticides or other adjuvants are added but prior to complete filling of the spray tank. Do not mix STRIKELOCK with Superb® HC, Alliance®, Class Act® Flex, or Class Act® NG® or other products in an induction system or container when all the products are undiluted. Once mixed in water, all the products are compatible in any mixing order.

For Direct Injection: STRIKELOCK can be applied through injection systems where STRIKELOCK is added to one of the system's chemical injection tanks. An in-line mixing chamber is recommended.

- Step 1 Add STRIKELOCK to the chemical injection tank.
- Step 2 Pump the correct amount of STRIKELOCK into the line.
- Step 3 Pump the proper amount of water, pesticide, and other adjuvants into the line for mixing with STRIKELOCK and chemicals before going into the spray boom.

Notice of Warranty

Seller warrants that the product conforms to its chemical description and is reasonably fit for the purposes stated on the label when used in accordance with directions under normal conditions of use. SELLER MAKES NO OTHER EXPRESS OR IMPLIED WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE, NOR IS ANY REPRESENTATIVE OF SELLER AUTHORIZED TO MAKE ANY SUCH WARRANTY OR MODIFY THESE TERMS. This warranty does not extend to the storage, handling or use of this product contrary to label instructions, or under abnormal conditions, or under conditions not reasonably foreseeable to Seller, and Buyer assumes the risk of any such storage, handling or use. Seller shall not be responsible for incidental or consequential damages, if any, resulting from a breach of warranty.
